

THERMALLY BROKEN ALUMINIUM ROOF VENTS

thermally broken aluminium roof vents have been developed and refined throughout the company's 18-year history.

Our vents are strong; stylish, functional and assembled with the utmost care thus ensuring this product will out perform other vents for years to come.

Glazing can be 16mm, 20mm, 24mm, 28mm, and 35mm. Please state your preference at the time of ordering.

We stock white, mahogany brown, van-dyke brown and light oak as standard colours in most of the thicknesses

however; we are able to offer this vent in any colour you desire.

You will not find a flimsy lid bracket on our vents; we have a unique invisible fixing that holds the bracket rigid. It will not flex or come undone like others we have seen.

Our drainage has also been planned so as to totally eliminate leaks in our lids whether the lid is inclined open or it is shut the water escapes from either end through the engineered slots.

The vent lid has no visible corner fixings even when the lid is open. All you see are the clean sculptured edges which compliment any roof system.

Supplied with chrome or brass winders as standard but a full range of electrics is also available.
