- SMARTFRAME supplied with all components required to assemble the unit.
- Fixings for installing unit to your frame or window reveal not supplied.
- Easy and quick to install.
- Neat and unobtrusive.
- Easy to remove for maintenance/cleaning.
- Detailed Installation Guide supplied.

## Measuring Your existing Window Reveal

**Recommended steps to measure your existing window reveal to identify your window reveal height and width.**

Using a metal tape measure:

1. Take (3) height measures as shown in the diagram. Use the smallest of the (3) measures as the dimension for the window reveal height (ideally and conventionally in millimetres (mm)).
2. Take (3) width measures as shown in the diagram. Use the smallest of the (3) measures as the dimension for the window reveal width (ideally and conventionally in millimetres (mm)).
3. It is useful to check the 'squareness' of your window reveal by checking the dimension of the (2) diagonals.

If your window reveal is square the dimensions of the (2) diagonals will be the same.

This will provide you with an indication of any packing needs when installing the SMARTSLIDER as it is strongly recommended that for the SMARTSLIDER to operate optimally; the SMARTSLIDER Outer frame is fitted square, true and level.
